DETAILED ACTION

- This action is responsive to the following communication: RCE filed on 8/4/05.
- Claims 1-6, 8-14, 16-35, and 37-42 are pending in application; claims 7, 15, and 36 have been canceled.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I: Claims 1-6, 8-14, 16-18, 38-42 drawn to a method of retrieving software update information from component memory of a printing device replaceable component, and wherein to download software update to component memory based upon software update information stored in component memory, classified in class 711, subclass 103.

Group II: Claims 19-22 are drawn to a toner cartridge for laser printer, classified in class 399, subclass 25.

Group III: Claims 23-30, and 32 drawn to a method of retrieving/installing software update based upon *pre-authorizing* verification indicator set advance in storage memory of printer device, classified in 358, subclass 1.15.

Group IV: Claim 31 drawn to a method of retrieving software update from component memory by determining if a verification indicator is set in memory of a host computer, classified in 717, subclass 171.

Group V: Claims 33-35, and 37 drawn to a printing device having a replaceable component, and wherein a replaceable component includes a storage memory for storing software update information, software update, and verification indicator.

Art Unit: 2624

Inventions I-V are related as subcombinations disclosed as usable together in a single combination, for example, a printing system for updating software update for printing device. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I drawn to a method of retrieving software update information from component memory of a printing device replaceable component, and wherein to download software update to component memory based upon software update information stored in component memory, wherein invention II drawn to a toner cartridge for laser printer, invention III drawn to a method of retrieving/installing software update based upon *pre-authorizing* verification indicator set advance in storage memory of printer device, invention IV drawn to a method of retrieving software update from component memory by determining if a verification indicator is set in memory of a host computer, and invention V drawn to a printing device having a replaceable component, and wherein a replaceable component includes a storage memory for storing software update information, software update, and verification indicator. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, each Group requiring a separate field of search, and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. 1.48 (b) if one or more of the

Art Unit: 2624

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. 1.48(b) and by the fee required under 37 C.F.R. 1.17(h).

A telephone call was made to Peter Reitan on 9/14/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
